

## METHOD/APPARATUS FOR MANAGING INFORMATION INCLUDING WORD CODES

### ABSTRACT OF THE DISCLOSURE

5        This disclosure suggests a set of solutions to the bottle-necks in  
managing knowledge distribution/sharing. It is particularly powerful  
when applied to a system working with the Internet. Working together  
with keyword extraction rules, the solutions include a method/apparatus  
based on access authorization records related to issuers or providers of  
10 documents, categories of documents, crucial key words of documents,  
and feedbacks from authorized document receivers, for selecting at least  
an organizational unit (or person) to be an authorized unit (or person)  
having access to an object document. The art also features combining at  
least two of three access authorization records. Furthermore the art also  
15 features combining at least two of four sub-processes.
